Crossroads Data Collection Solution

Connect your manufacturing plant to the rest of your enterprise.

Since the introduction of the RMC³ product suite in 1995 as the first data collection solution certified by Baan, it has been implemented in over 300 customer sites worldwide, making it a leader of advanced data collection solutions for the Baan/ERP_{LN} community.

The RMC³ Data Collection Suite ("RMC³") provides Baan and ERP_{LN} users with realtime, accurate information to reduce operational costs and automate shop floor, warehousing and distribution operations. RMC³ data collection applications improve the accuracy of collecting, recording and transferring information. By reducing the labor required to collect information, RMC³ increases the available time to perform value-added activities and decreases indirect cost. By combining sessions, eliminating duplicate entries and using available information to complete a transaction, RMC³ extends the Baan/ERP_{LN} applications to ensure efficiencies and timely information flow and reporting.

The RMC³ Data Collection Suite includes dozens of applications for these operational areas:

- Warehouse Management
- Production Management
- Materials Management
- Sales and Shipping Management
- Time and Labor Reporting
- Label Generation

The RMC³ Data Collection Suite also includes middleware that delivers seamless connection to Baan/ERP_{LN}, extensive tools for managing and troubleshooting your system, a query server that allows direct, customizable queries to the database, multi-language support, and proven performance.

"Improving the efficiency of all our operations is key to our ongoing success. Crossroads RMC's Data collection solution clearly can help us on an ongoing basis, and it offers immediate improvement and a foundation we can continue to build on."

RMC³ connects production to your ERP

“Best in class manufacturers are more likely to be connecting to the plant floor level and automating data collection. They are providing visibility to the decision makers and are able to optimize production in real time.”

Aberdeen Group 2008

Crossroads RMC Data Collection Solution:

Warehouse and Material Management:

- Receiving
- Cross Docking
- Inspection Reporting
- Put Aways
- Paperless Pick
- Materials Issues
- Inventory Transfers
- Inventory Adjustments
- Cycle Counts
- Outbounding
- Purchase Order Inquiry
- Stock inquiry & Shop Floor

Sales Order and Shipping Management:

- Point of Sales
- Compose and Confirm Loads
- Pallet Assignment
- UPS and FedEx Integration
- Shipments Quality Control
- Maintain Deliveries
- Proof of Delivery
- Ship to Repair Vendor

Production Management:

- Report Production Orders Complete
- Streamlined Production Orders Complete
- Report Production Operations Complete
- Process Production Orders
- Subcontract Receipt Complete
- Reverse Completed Production Order Quantity
- Standard Labor Reporting
- RMctime Time and Labor Reporting

Barcode Label Generation:

- Item/Inventory Labels
- Receiving Labels
- Production Labels
- Shipping Labels
- RFID tags

Manufacturing executives looking to improve quality, efficiency and gain visibility into production operations find that data collection is the answer. Complete the information flow throughout your enterprise. Crossroads RMC's data collection solution connects production operations to your ERP system in realtime. Contact Crossroads RMC today.
