Real-Time Dashboards & Business Insights

Stop waiting on end-of-month reports. NextTrack Insights turns your Infor ERP data into clear, real-time dashboards that everyone, from the shop floor to the front office, can act on immediately.

Built on Crossroads RMC's decades of Infor ERP experience, NextTrack Insights connects directly to your LX/BPCS, LN/Baan, M3, XA and SyteLine data, so your dashboards reflect what's actually happening in your business without heavy setup or custom reporting projects. And because NextTrack Insights also runs as a stand-alone product, you don't need an ERP connection at all to get started.

What is NextTrack Insights

NextTrack Insights is an analysis and dashboarding tool that lets you see the "big picture" or drill into the finer details, all without touching your ERP system. It provides sophisticated grids, charts, gauges and maps, with filtering, Excel export, PDF printing and email delivery, so your sales, finance, inventory and shop floor data is always current and always actionable. And when you're ready, layer in AI to surface trends, anomalies and plain-language answers to your data questions.

Common Reporting Challenges

- **Stale, end-of-month data** – By the time a report is generated, the moment to act on it has often already passed.
- **Disconnected views across roles** – Operators, managers and executives each need a different lens on performance, but most systems only offer one.
- **Manual, one-off reporting** – Static spreadsheets and paper reports require rebuilding every time a new question comes up, wasting time better spent on decisions.

If your team is still waiting on reports instead of watching performance unfold in real time, it's time to see what a live dashboard can do. NextTrack Insights is designed to give every level of your organization, from the shop floor to the boardroom, the same trusted, real-time view of your ERP data, with insight available with or without AI.

What You Can Do with NextTrack Insights

Live Visibility

Give operators, managers and executives their own real-time view of performance, all drawn from the same trusted ERP data.

AI-Powered Insights

Start with clear, out-of-the-box dashboards, then layer in AI to surface trends, anomalies and answers to plain-language questions when you're ready.

Data-Backed Decisions

Spot issues and opportunities as they emerge, and act while it still makes a difference, across sales, finance, inventory and shop floor.

Answers on Demand

Find out which lines of business are performing best, what machines are down on the shop floor, how sales trend over time and what your customers' purchase patterns reveal.

Flexible by Design

Designed for Infor ERP, and can stand on its own, so your dashboards reflect your data without heavy setup or custom reporting projects.
